

<Things that I thought would be helpful>

1) this is same as before

2) I needed to change the data structure so links could work together. New changes are instead of names we have to use number(just temporary until we figure out a new system).

Main INBOX PAGE Hello 1111

- [sung](#) says: "123" on 2015/2/22"
Check it out: [HERE](#)
[KEEP IT](#)

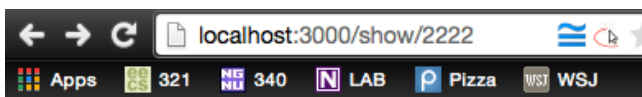

*Note numbers after “show”. So your Rawan’s page should be show/2222 (just for now)

```
/// PLACE HOLDERS FOR LOGIN!  
  
var SUNG = 1111;  
var RAWAN = 2222;  
var DIANA = 3333;  
var KIRTI = 4444;  
var ASHA = 5555;  
/// FOR TESTER SETTING THE CURRENT USER AS ME  
var USER = "sung";  
|
```

3) New data structure, the IDs are like we discussed but the child name is actually the timestamp. This is needed for queries and matches

```
kipsandbox
1424667175390
  From: "sung"
  Msg: "123"
  Site: " "
  Time: "2015/2/22"
  TimeStamp: 1424667175390
  To: "sung"
  fromIdNum: 1111
  isLiked: true
  toldNum: 1111
```

4) So... now when you click “sung”

Main INBOX PAGE Hello 2222

- [sung](#) says: "123" on 2015/2/22
Check it out: [HERE](#)
KEEP IT

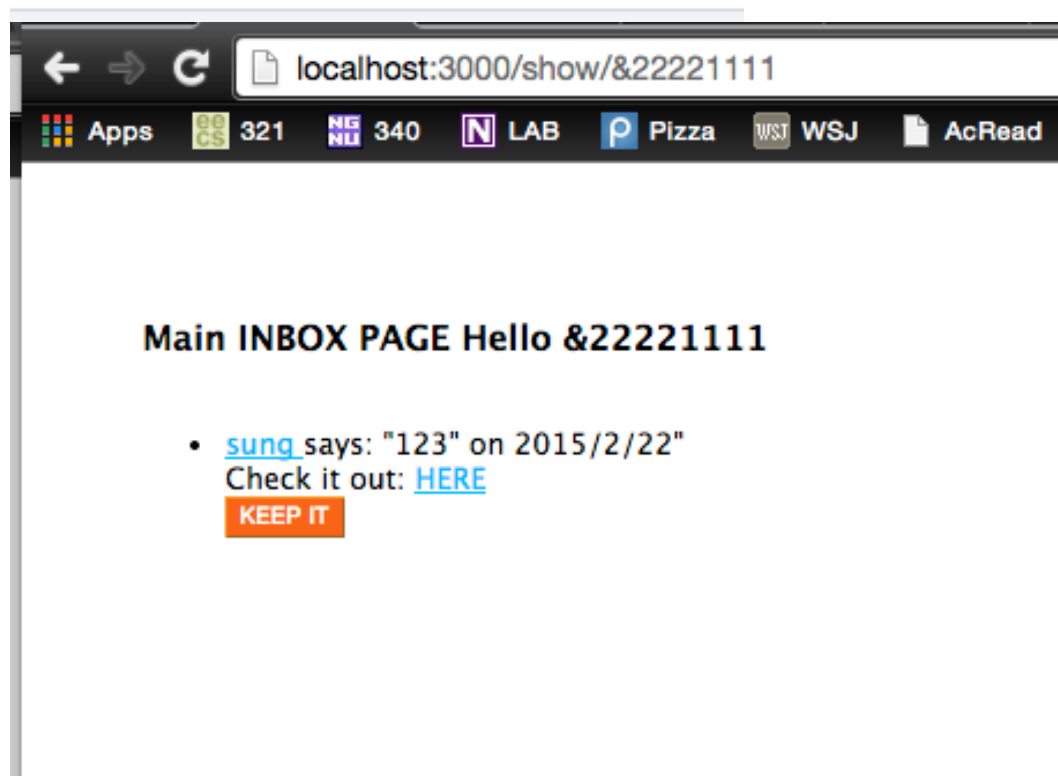

5) Now notice that it is &"2222" rawan "1111" Sung

Main INBOX PAGE Hello &22221111

6) nothing was there... that's because I haven't pressed the "keep it" button. When pressed "isLiked" is TRUE

```
----- toldNum: 1111
----- 1424667619997
----- From: "sung"
----- Msg: "123"
----- Site: " "
----- Time: "2015/2/22"
----- TimeStamp: 1424667619997
----- To: "rawan"
----- fromIdNum: 1111
----- isLiked: true
----- toldNum: 2222
```

Now up and running..
